Profile

Extensive experience with languages such as JavaScript, PHP, HTML, CSS, and SQL, as well as proficiency in frameworks, libraries, and ORMs. Degree in web design and full-stack development. I am currently studying Systems Analysis and Development, and I work mainly in the PHP ecosystem, with Composer, Laravel, and Wordpress architecture being part of my daily routine in the development and efficient management of these tools. I also have advanced knowledge of network and server infrastructure, which allows me to work on projects from start to finish, from coding to the production environment. Experience with agile methodologies, especially SCRUM.

Games

Main projects

Workopia

Customized PHP framework/website inspired by Laravel, with a job vacancy platform that includes user registration, job management and application functionality, to understand the framework from the inside, for learning purposes. Built with PHP and MySQL.
